

Project Executable Files

Date	15 March 2026
Team ID	SWTID-2026-4683
Project Name	EduGenie: Google Gemini Powered Learning Assistant
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	N/A
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	N/A
7	APK / Executable binary (if applicable for mobile/desktop apps)	N/A
8	Dockerfile / Containerization config (if applicable)	N/A
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	N/A

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

/EduGenie-project
/src - Frontend and application source code
/components - Reusable UI components
/services - Gemini API and application services
/tests - Test files and test cases
/docs - Project documentation
/config - Configuration files
README.md - Setup and run instructions
requirements.txt / package.json - Project dependencies
.env.example - Environment variable template

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	To be provided after deployment
Login Credentials (Demo)	Not required / To be provided if authentication is enabled
Platform / Hosting Provider	To be specified (e.g., Vercel / Render / AWS / similar)
Repository Link	GitHub repository for EduGenie project
Demo Video Link	To be provided

Project: EduGenie: Google Gemini Powered Learning Assistant **Name:** Dechen

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

- Pre-requisites:**
- Python 3.10+ (if Python backend is used)
 - Node.js and npm (if a JavaScript frontend is used)
 - Git
 - Internet connection for Google Gemini API access
 - A valid Gemini API key configured through environment variables
- Step 1:** Clone the EduGenie repository from GitHub.
- Step 2:** Install the project dependencies using the dependency file provided.
- Step 3:** Create a local `.env` file from `.env.example` and configure the Gemini API key.
- Step 4:** Start the backend/application service using the project run command.
- Step 5:** Start the frontend, if applicable, using the project's npm start/development command.
- Step 6:** Open the application in a browser and test the learning-assistant features.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Responses depend on the availability and response time of the Google Gemini API.	Ensure valid API credentials and network connectivity.
2	AI-generated responses may require user verification for academic accuracy.	Use the assistant as a learning aid and verify important information.
3	API usage may be subject to provider quotas or rate limits.	Monitor usage and apply appropriate request/error handling.

Submission Notes

All executable/source files should be maintained in the project repository together with the setup documentation. Sensitive credentials such as API keys should not be committed to the repository; use the provided environment configuration template instead.
